DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: the incorrect referencing "example 4" in page 8 made by the pre-amendment of Sept. 9, 2003. should it be -Experment 4—"?

Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claim 1 is rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a field free zone being of either (1) in a region in close proximity to a zone of charge carrier generation or (2) in a region of current conduction between field generating elements, including the surface of the field generating elements, does not reasonably provide enablement for a field free

zone being in a station different than the above. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims. The above claim recites the introducing of the oxidizing gas into the plasma to form the active volume before the plasma is expanded into field-free zone. Because of the breadth of the claim, the above claimed subject matter can be interpreted as that the field-free zone can be other than the enabling field-free zone, for example. And the specification does not enable such an interpretation.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Pirzada et al. (US 5,788,738). Pirzada's invention is directed to a method of producing

nanoscale powders by quenching of vapors. Pirzada disclose in Example 5 a process comprised the steps of generating plasma and fluidizing a precursor with an oxidizing gas. The last step inherently forming the recited active volume.
